

Mrs. Payalben H. Hinsu | A.Y.: 2025-26 | Sem./Year: 4 | Course: 2302CS402 - PHP and WordPress | Slot Type: Lab (TA) | Division: CE-4A

Sr.	Course Content	Planning Title	Planning Description
1	-	Lab-1	1) Create a weekly class timetable using HTML. Use table tags to clearly display the days and time slots, incorporating rowspan and colspan where necessary. Apply basic CSS styling to make the table neat, organized, and visually appealing. (A) 2) Create an HTML document with an ordered list, unordered list and description list. (B) 3) Create an HTML document using the tag to organize content into sections. Apply basic CSS to style the sections. (C)
2	-	Lab-2	1) Create an HTML-based login interface that includes input fields for both the username and password. (A) 2) Create an HTML student registration page that includes the following input fields such as name, email, phone number, gender, semester, branch, address, and hobbies. (B) 3) Create a static webpage using CSS to design an attractive and visually appealing layout. (C)
3	Introduction to PHP	Lab-3	1) Write a program to display "Hello World". (A) 2) Write a program to display a message using variable. (A) 3) Write a program that prints the value of a variable whose name is stored in another variable. (A) 4) Write a program to print value of variable using string concatenation. (A) 5) Create a PHP script - o Declare a variable \$value and assign it an integer value (e.g., \$value = 10;). - o Use the gettype() function to display the type of \$value. - o Use settype(\$value, 'string') to change the type of \$value to a string. - o Use gettype() again to display the new type of \$value. - o Use var_dump(\$value) to display the value and type of \$value after the conversion. (B) 6) Write a PHP program to demonstrate variable scopes: local, global, and static. (B) 7) Write a program to swap values of two variables with the help of 3rd variable. (C) 8) Write a program to swap values of two variables without using 3rd variable. (C)
4	Introduction to PHP	Lab-4	1) Write a program to check a person is eligible to vote. (A) 2) Write a program to check whether the given number is odd or even. (A) 3) Write a program to check whether the given number is positive, negative or zero. (A) 4) Write a program to find the greatest number from 2 numbers. (A) 5) Write a program to find the greatest number from 3 numbers. (B) 6) Write a program to convert temperature from Fahrenheit to Celsius. (B) 7) Write a program to print the class of result based on percentage (i.e., less than 40% -> Fail, 40% to 50% -> Pass Class, 50% to 60% -> Second Class, 60% to 70% -> First Class, above 70% -> Distinction). (C) 8) Write a program that reads a number in meters, converts it to feet, and displays the result. (C)

Mrs. Payalben H. Hinsu | A.Y.: 2025-26 | Sem./Year: 4 | Course: 2302CS402 - PHP and WordPress | Slot Type: Lab (TA) | Division: CE-4A

5	Introduction to PHP	Lab-5	1) Write a program to take a value from 1-7 and display current day using switch case. (If 1-Monday, 2-Tuesday, etc.). (A) 2) Write a program to find a diameter from given area of circle. (A) 3) Write a program to make a simple calculator using switch case. (B) 4) Write a program to print class of result based on percentage using switch case (i.e. less than 40% -> Fail, 40% to 50% -> Pass Class, 50% to 60% -> Second Class, 60% to 70% -> First Class, above 70% -> Distinction). (B) 5) Write a program to check to given year is a leap or not. (B) 6) Write a program that check whether a letter is a vowel or consonants. (C)
6	Introduction to PHP	Lab-6	1) Write a program to print first n numbers using for, while and do while loop. (A) 2) Write a program to print first n odd numbers using for, while and do while loop. (A) 3) Write a program to demonstrate foreach loop. (A) 4) Write a program to calculate and display sum and product of first N number. (B) 5) Write a program to generate Fibonacci series of N number. (B) 6) Write a program to check whether the given number is prime or not. (B) 7) Write a program to check given number is Palindrome or not. (C) 8) Write a program to check given number is Armstrong or not. (C)
7	Introduction to PHP	Lab-7	1) Write a program to print following patterns: i) * ** *** **** ***** ii) 1 1 2 1 2 3 1 2 3 4 1 2 3 4 5 iii) * * * * * * * * * * * * * * * iv) 1 2 3 4 5 2 3 4 5 3 4 5 4 5 5 v) 5 5 4 5 4 3 5 4 3 2 5 4 3 2 1 vi) 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15
8	Introduction to PHP	Lab-8	1) Write a program to create numeric array and print it. (A) 2) Write a program to create associative array and print it. (A)

Mrs. Payalben H. Hinsu | A.Y.: 2025-26 | Sem./Year: 4 | Course: 2302CS402 - PHP and WordPress | Slot Type: Lab (TA) | Division: CE-4A

			3) Write a program to create multidimensional array and print it. (B) 4) Create a PHP script that performs the following tasks using array functions on a numeric array of student scores: \$scores = [85, 78, 92, 67, 90]; ○ Shuffle the scores randomly and display the result. ○ Add a new score to the end of the list. ○ Remove the last score. ○ Remove the first score. ○ Add a new score to the beginning of the list. (B) 5) Create a PHP script that performs the following tasks using array functions on an associative array of student scores: \$students = ["Alice" => 85, "Bob" => 78, "Charlie" => 92, "David" => 67, "Eve" => 90]; ○ Display the total number of students. ○ Print all student names and all scores separately. ○ Calculate and display the total and product of all scores. ○ Find the lowest and highest score in the list. ○ Check if any student has a score of 90. ○ Find the student who scored 92. (C)
9	Introduction to PHP	Lab-9	1) Write a program to count number of even or odd number from an array of n number. (A) 2) Write a program to find the average of n number using array. (A) 3) Write a program to accept n numbers in an array. Display the sum of all the numbers which are divisible by either 3 or 5. (B) 4) Write a program to accept n numbers in an array. Now, enter a number and search whether the number is present or not in the list of array elements by using linear search. (B) 5) Write a program to sort given array in descending order without using inbuilt function. (C)
10	Functions and Form	Lab-10	1) Write a program to create a user-defined function that prints your name and call it. (A) 2) Write a program to create user define function for adding two numbers and display the result. (A) 3) Write a program to create calculator using all four types of UDF. (B) 4) Write a program to calculate simple interest using method. (B) 5) Write a program to generate Fibonacci series of N given number using method. (C)
11	Functions and Form	Lab-11	1) Write a program that calculates area of circle, triangle and square using user defined function. (A) 2) Write a program to find maximum number from given three numbers using user defined function. (A) 3) Write a program to accept a number and check whether the number is prime or not. Use user defined function name as check (int n). The method returns 1, if the number is prime otherwise, it returns 0. (B) 4) Write a program to take two values as an input from the user and display all the prime numbers between the two given numbers using function. (C)
12	Functions and Form	Lab-12	1) Write a program to print numbers from N to 1 using recursion. (A) 2) Write a program to calculate sum of first n numbers using recursion. (A) 3) Write a program to calculate factorial of a number using recursion. (B) 4) Write a program to generate Fibonacci series of N number using recursion. (B) 5) Write a program to check whether the number is prime or not using recursion. (C)

Mrs. Payalben H. Hinsu | A.Y.: 2025-26 | Sem./Year: 4 | Course: 2302CS402 - PHP and WordPress | Slot Type: Lab (TA) | Division: CE-4A

13	Functions and Form	Lab-13	1) Write a program to demonstrate the use of include, require, include_once and require_once. (A) 2) Demonstrate the use of PHP's include, require, include_once, and require_once functions to partition a webpage into different sections. (B) 3) Write a PHP program that creates an HTML form to do the following: - o Place a text input field outside the tag and associate it with the form using the input's form attribute and the form's id. - o Use the required attribute on one or more input fields to ensure the user must fill them before submitting. - o Add the novalidate attribute to the tag while keeping the required attributes on inputs to observe the behaviour. - o Use the autocomplete attribute on the tag. - o Add the accept-charset attribute to the tag. - o Utilize the target attribute with values like _self, _blank, _parent, _top, and a custom iframe name. - o Set action="" or action="#" to submit the form to the same page. - o Set action to a different PHP page to handle submission. - o Test the form with different target values for each action. (C)
14	Functions and Form	Lab-14	1) Design a student registration form and retrieve data in controller page using following Method: GET, POST, and REQUEST. (A) 2) Design an employee registration form and retrieve data in controller page using following Method: GET, POST, and REQUEST. (B) 3) Create form with all input types and retrieve data in controller page using following Method: GET, POST, and REQUEST. (C)
15	Functions and Form	Lab-15	1) Write a program to explore the string functions. (A) 2) Create a PHP script that performs the following tasks using given a string with some text, and you need to use the string functions listed below to perform various operations on it. \$text = " PHP is a powerful scripting language for web development. "; - o Find the length of the string. - o Convert the string to uppercase and display the result. - o Convert the string to lowercase and display the result. - o Find the position of the word "powerful" in the string. - o Replace the word "scripting" with the word "programming". - o Extract the word "PHP" from the string. - o Reverse the string and display the result. - o Trim the leading and trailing spaces from the string. - o Repeat the string "PHP " 5 times and display the result. - o Implode the array of words ["PHP", "is", "a", "powerful", "language"] into a string, with a space separating each word. - o Explode the string into an array using spaces as the delimiter, and display the array. - o Shuffle the characters of the string randomly and display the result. - o Convert newlines in a string to
 tags. Use the string "Hello\nWorld" for this task. (B) 3) Create a PHP script that performs the following operations on an array of names (strings). Use the array_map() function wherever applicable, and string functions to manipulate the array values:

Mrs. Payalben H. Hinsu | A.Y.: 2025-26 | Sem./Year: 4 | Course: 2302CS402 - PHP and WordPress | Slot Type: Lab (TA) | Division: CE-4A

			<pre>\$names = [" Alice ", " JessiCA", " charlie", " DAVID", " eVa", " AleXa", " Olivia", " Levi "];</pre> - Trim leading and trailing whitespace from each name. - Convert all names to lowercase. - Capitalize the first letter of each name. - Find and display the length of each name. - Reverse each name and display the reversed names. - Check if any name contains the substring "vi" (case-insensitive). Print those names. - Join all names into a single string separated by a comma and a space. (C)
16	Form Handling and Session Management	Lab-16	- Implement server-side validation on student registration form using PHP. (A) - Implement server-side validation on employee registration form using PHP. (B) - Implement server-side validation on form with all input types using PHP. (C)
17	Form Handling and Session Management	Lab-17	- Create a webpage which accepts a file and upload it in specified folder on server. (A) - Design a profile page which allows changing profile picture dynamically. (B) - Create a webpage which accepts an image file in .jpg or .jpeg or .png format only and that to maximum of 1MB. (C)
18	Form Handling and Session Management	Lab-18	- Write a program to check the given file name is exists or not if exists than print the size of the give file. (A) - Write a program to create file named "students.txt" to store names of the students. (A) - Write a program to read names of the students from "students.txt" file. (A) - Write a program to create file named "employee.txt" to store empno, name, gender and mobileno. Open the same file again to display the content of the file. (B) - Write a file named "teachers.txt" and copy the content of file named "employee.txt" in it. (B) - Write a program to append the file named "students.txt" to add details of 3 new students in a file. (C) - Write a program to read a csv file named "result.csv". (C)
19	Form Handling and Session Management	Lab-19	- Create a PHP script that sets a cookie named username with the value (your name), and make it last for 1 hour. (A) - Make a script that counts how many times a user has visited the page by using a cookie. (B) - Create static login application using COOKIE in PHP. (B) - Create a webpage showing multiple items with add to cart and purchase functionality and on click of purchase it will redirect user to bill page that will show the detailed bill using COOKIES. (C)
20	Form Handling and Session Management	Lab-20	- Write a PHP script that starts a session and sets a session variable called username with the value (your name). (A) - Store multiple user details like username, email, and role in the session and display them on the profile page. (B) - Create static login application using SESSION in PHP. (B) - Create a webpage showing multiple items with add to cart and purchase functionality and on click of purchase it will redirect user to bill page that will show the detailed bill using SESSION. (C)
21	Database programming using PHP	Lab-21	- Understanding and working with basic SQL commands on a sample database. (A) - Understanding and working with PHP functions for database connectivity. (B) - Write a PHP to check database connectivity on a sample database. (C)

Mrs. Payalben H. Hinsu | A.Y.: 2025-26 | Sem./Year: 4 | Course: 2302CS402 - PHP and WordPress | Slot Type: Lab (TA) | Division: CE-4A

22	Database programming using PHP	Lab-22	1) Implement a PHP script for insert and read operations on the student table. (A) 2) Implement a PHP script for insert and read operations on the employee table. (B)
23	Database programming using PHP	Lab-23	1) Implement a PHP script for update and delete operations on the student table. (A) 2) Implement a PHP script for update and delete operations on the employee table. (B)
24	Database programming using PHP	Lab-24	1) Create a student registration form to implement CRUD database operation. (A) 2) Create an employee registration form to implement CRUD database operations. (B)
25	Database programming using PHP	Lab-25	1) Implement a PHP script for insert and read operations on students table using prepared statement in PHP. (A) 2) Implement a PHP script for insert and read operations on employee table using prepared statement in PHP. (B)
26	Database programming using PHP	Lab-26	1) Implement a PHP script for update and delete operations on students table using prepared statement in PHP. (A) 2) Implement a PHP script for update and delete operations on employee table using prepared statement in PHP. (B)
27	Database programming using PHP	Lab-27	1) Implement CRUD operations on student table using stored procedure in PHP. (A) 2) Implement CRUD operations on employee table using stored procedure in PHP. (B)
28	Introduction to WordPress	Lab-28	1) Download and install WordPress on the XAMPP. (A) 2) Create a WordPress website for blogging, activate a suitable theme, and explore each customization setting appropriate for website. (B) 3) Create at least 3 WordPress posts with text, images, and different post formats, and 3 professional pages for your blog website. (B) 4) Explore and implement a comment section with options to approve, reject, and delete comments. Apply this functionality to both the post and page sections of a blog website. (C)
29	Introduction to WordPress	Lab-29	1) Create, edit, and change categories and tags for blog website. (A) 2) Set the core settings of WordPress for the given content and add a new user. (B) 3) Use different Widgets depending on the posts and pages in blog website. (C)
30	Introduction to WordPress	Lab-30	1) Create a WordPress website for e-commerce purpose, activate a suitable e-commerce theme, and explore each customization setting appropriate for blogs and install and active the WooCommerce plugin for e-commerce website. (A) 2) Add minimum 5 products and explore customized option setting while adding products. (A) 3) Create categories and tags for products of e-commerce website. (A) 4) Explore and customize settings for the product filter. (B) 5) Design coupon code for selling product and upload stock of item on site. (C)
